

Step-by-step guide on using your control panel

Step 1

Get familiar with the control panel.

The screen will display a range of useful information.

This includes:

- Battery charge percentage
- Battery state percentage
- Solar charge/status AMPS/%
- Water level indicator
- Battery type AGM/Lithium
- 240v mains power supply
- Isolate power to the van

The model also includes the following buttons (from left to right):

HWS: Hot Water System

PUMP: Water Pump

PWR: Power

DIM: Screen dimming

The button border will illuminate when a button is pressed.

If you press an illuminated button again, it will turn the specified function off.

Step 2

To turn on your hot water system, simply press the 'HWS' button.

This will provide you with access to hot water.

Step 3

To operate your water pump, press on the 'PUMP' button.

In this case, the battery is sitting at 13.3 volts (6.9 amps).

Underneath this, the battery type is displayed on the screen.

This RV has a 100-amp lithium battery.

The amount of battery charge is displayed below this in minutes.

As displayed on the screen, this RV has 893 minutes of solar charge/battery capacity.
